

# MATHEMATICS ALIGNMENT

(Student Standards and Teacher Preparation Standards)

Indiana Professional Standards Board

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

	Kindergarten Student Standard	Teacher Preparation Standard
<p><b><u>Standard 1. NUMBER SENSE</u></b></p> <p>Students understand the relationship between numbers and quantities up to 10, and that a set of objects has the same number in all situations regardless of the position or arrangement of the objects.</p>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Match sets of objects</li> <li>• Compare sets of up to 10 objects</li> <li>• Know that larger numbers describe sets with more objects in them than sets described by smaller numbers</li> <li>• Divide sets into equal groups (up to 10 objects)</li> <li>• Divide shapes into equal parts</li> <li>• Count, recognize, represent, name and order objects (up to 10 objects)</li> <li>• Find the number that is one more or one less than any whole number (up to 10 objects)</li> <li>• Use correctly the words one/many, none/some/all, more/less, most/least</li> <li>• Record and organize information using objects and pictures</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Have a well developed number sense (mathematics, estimation, reasonableness of results)</li> <li>• Understand number concepts, operations and properties (including basic number theory)</li> <li>• Understand algorithms and place value</li> <li>• Extend number systems from whole numbers to fractions and integers, rational and real numbers</li> <li>• Extend operations, properties and ordering</li> <li>• Notation of fractions, decimals, percents, ratio and proportion</li> </ul>
<p><b><u>Standard 2. COMPUTATION</u></b></p> <p>Students understand and describe simple additions and subtractions.</p>	<p><b>COMPUTATION</b></p> <ul style="list-style-type: none"> <li>• Model addition by joining sets of objects (for any two sets with fewer than 10 objects when joined)</li> <li>• Model subtraction by removing objects from sets (for numbers less than 10)</li> <li>• Describe addition and subtraction situations (for numbers less than 10)</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Develop mathematical language and symbolism and how we communicate mathematical ideas</li> <li>• Represent and solve problems requiring the use of variables</li> <li>• Understand concepts of functions and their use</li> <li>• Understand different representations of functions (tubular, graphical, symbolic, verbal)</li> <li>• Distinguish between continuous and discrete approaches</li> </ul>

<p><b>Standard 6: PROBLEM SOLVING</b></p> <p>Students make decisions about how to set up a problem.</p>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Choose the approach, materials, and strategies to use in solving problems</li> <li>• Use tools such as objects or drawings to model problems</li> <li>• Explain the reasoning used with concrete objects and pictures</li> <li>• Make precise calculations and check the validity of the results in the context of the problem</li> </ul>	<ul style="list-style-type: none"> <li>• Differentiate units to record measure from the process of measurement itself</li> <li>• Understand estimation</li> <li>• Understand the metric system</li> <li>• Understand formulas for perimeter, area, and volume</li> </ul> <p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use mathematical inquiry including: <ul style="list-style-type: none"> <li>* Questioning techniques</li> <li>* Discovery</li> <li>* Reasoning processes</li> <li>* Alternative strategies</li> <li>* Technology</li> <li>* Reflective processes</li> <li>* Analysis and justification</li> <li>* Formulating the problem</li> </ul> </li> </ul>
---	--	---

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**1<sup>st</sup> Grade Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. NUMBER SENSE</u></b></p> <p>Students understand symbols, objects, and pictures used to represent numbers up to 100 and show an understanding of fractions.</p>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Count, read, and write whole numbers to 100</li> <li>• Count and group objects in ones and tens</li> <li>• Identify the number of tens and ones (to 100)</li> <li>• Name the number that is one more or one less than a number (to 100)</li> <li>• Compare whole numbers to 10 and arrange them in numerical order</li> <li>• Match the number names first, second, third etc. with an ordered set of up to 10 items</li> <li>• Recognize when a shape is divided into congruent parts</li> <li>• For a shape divided into 8 or fewer congruent parts, describe a shaded portion as “___out of ___parts” and write the fraction</li> <li>• For a set of 8 or fewer objects, describe a subset as “___out of ___parts” and write the fraction</li> <li>• Represent, compare, and interpret data using pictures and picture graphs.</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Have a well developed number sense (mathematics, estimation, reasonableness of results)</li> <li>• Understand number concepts, operations and properties (including basic number theory)</li> <li>• Understand algorithms and place value</li> <li>• Extend number systems from whole numbers to fractions and integers, rational and real numbers</li> <li>• Extend operations, properties and ordering</li> <li>• Notation of fractions, decimals, percents, ratio and proportion</li> </ul>
<p><b><u>Standard 2. COMPUTATION</u></b></p> <p>Students demonstrate the meaning of addition and subtraction and use these operations to solve problems.</p>	<p><b>COMPUTATION</b></p> <ul style="list-style-type: none"> <li>• Show the meaning of addition using objects</li> <li>• Show the meaning of subtraction using objects</li> <li>• Show equivalent forms of the same number (to 20) using objects, diagrams and numbers</li> <li>• Demonstrate mastery of addition facts (to 20) and corresponding subtraction facts.</li> <li>• Understand the meaning of the symbols +, -, and =</li> <li>• Understand the role of zero in addition and subtraction</li> <li>• Understand and use the inverse relationship between addition and subtraction to solve simple problems</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Develop mathematical language and symbolism and how we communicate mathematical ideas</li> <li>• Represent and solve problems requiring the use of variables</li> <li>• Understand concepts of functions and their use</li> <li>• Understand different representations of functions (tubular, graphical, symbolic, verbal)</li> <li>• Distinguish between continuous and discrete approaches</li> </ul>

<p><b><u>Standard 3. ALGEBRA AND FUNCTIONS</u></b></p> <p>Students use number sentences with the symbols +, -, and = to solve problems.</p>	<p>ALGEBRA AND FUNCTIONS</p> <ul style="list-style-type: none"> <li>• Write and solve number sentences from problem situations involving addition and subtraction</li> <li>• Create word problems that match given number sentences involving addition and subtraction</li> <li>• Recognize and use the relationship between addition and subtraction</li> <li>• Create and extend number patterns using addition</li> </ul>	<p>ALGEBRA and FUNCTIONS</p> <ul style="list-style-type: none"> <li>• Extend system of real numbers to complex numbers</li> <li>• Understand clock arithmetic</li> <li>• Understand modular systems</li> <li>• Understand matrices</li> <li>• Understand solutions of systems of equations</li> </ul>
<p><b><u>Standard 4. GEOMETRY</u></b></p> <p>Students identify common geometric shapes, classify them by common attributes, and describe their relative position or their location in space.</p>	<p>GEOMETRY</p> <ul style="list-style-type: none"> <li>• Identify, describe, compare, sort, and draw triangles, rectangles, squares, and circles</li> <li>• Identify triangles, rectangles, squares, and circles as faces of 3-dimensional objects</li> <li>• Classify and sort familiar plane and solid objects by position, shape, size, roundness and other attributes. Explain the rule you used</li> <li>• Identify objects as two- and three-dimensional</li> <li>• Give and follow directions for finding a place or object</li> <li>• Arrange and describe objects in space by position and direction: near, far, under, over, up, down, behind, in front of, next to, to the left or right of</li> <li>• Identify geometric shapes and structures in the environment and specify their location</li> </ul>	<p>GEOMETRY</p> <ul style="list-style-type: none"> <li>• Understand how geometry is used to describe the world in which we live</li> <li>• Analysis of 2- and 3- dimensional figures <ul style="list-style-type: none"> <li>* Tessellations</li> <li>* Symmetry</li> <li>* Polygons</li> <li>* Polyhedra</li> <li>* Curved shapes</li> </ul> </li> <li>• Understand synthetic geometry</li> <li>• Understand coordinate geometry</li> <li>• Understand transformational geometry</li> <li>• Build justifications and coherent arguments</li> <li>• Understand spatial visualization</li> </ul>
<p><b><u>Standard 5. MEASUREMENT</u></b></p> <p>Students learn how to measure length, as well as how to compare, order, and describe other kinds of measurements.</p>	<p>MEASUREMENT</p> <ul style="list-style-type: none"> <li>• Measure the length of objects by repeating a non-standard or a standard unit</li> <li>• Use different units to measure the length of the same object and predict whether the measure will be greater or smaller when a different unit is used.</li> <li>• Recognize the need for a fixed unit of length</li> <li>• Measure and estimate the length of an object to the nearest inch and centimeter</li> </ul>	<p>MEASUREMENT</p> <ul style="list-style-type: none"> <li>• Understand the historical perspective</li> <li>• Understand the attributes of: <ul style="list-style-type: none"> <li>* Length</li> <li>* Area</li> <li>* Volume</li> <li>* Capacity</li> <li>* Time</li> <li>* Temperature</li> </ul> </li> </ul>

<p><b>Standard 6: PROBLEM SOLVING</b></p> <p>Students make decisions about how to set up a problem. Students solve problems and justify their reasoning.</p>	<ul style="list-style-type: none"> <li>• Compare and order objects according to area, capacity, weight, and temperature, using direct comparison or a non-standard unit.</li> <li>• Tell time to the nearest half-hour and relate time to events (before/after, shorter/longer)</li> <li>• Identify and give the values of pennies, nickels, and dimes.</li> </ul> <p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Choose the approach, materials, and strategies to use in solving problems</li> <li>• Use tools such as objects or drawings to model problems</li> <li>• Explain the reasoning and justify the procedures selected in solving a problem</li> <li>• Make precise calculations and check the validity of the results in the context of the problem</li> <li>• Understand and use connections between two problems</li> </ul>	<ul style="list-style-type: none"> <li>* Angles</li> <li>* Weight</li> <li>* Mass</li> </ul> <ul style="list-style-type: none"> <li>• Differentiate units to record measure from the process of measurement itself</li> <li>• Understand estimation</li> <li>• Understand the metric system</li> <li>• Understand formulas for perimeter, area, and volume</li> </ul> <p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use mathematical inquiry including: <ul style="list-style-type: none"> <li>* Questioning techniques</li> <li>* Discovery</li> <li>* Reasoning processes</li> <li>* Alternative strategies</li> <li>* Technology</li> <li>* Reflective processes</li> <li>* Analysis and justification</li> <li>* Formulating the problem</li> </ul> </li> </ul>
--	---	--

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**2<sup>nd</sup> Grade Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. NUMBER SENSE</u></b></p> <p>Students understand the relationships among numbers, quantities, and place value in whole numbers up to 100. They understand that fractions may refer to parts of a set and parts of a whole.</p>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Count by 1s, 2s, 5s, and 10s to 100</li> <li>• Identify the pattern of numbers in each group of 10 from 10s through 90s</li> <li>• Identify numbers up to 100 in various combinations of tens and ones.</li> <li>• Name the number that is 10 more or 10 less than any number 10-90</li> <li>• Compare whole numbers to 100 and arrange them in numerical order</li> <li>• Match the number names first, second, third, etc. with an ordered set (to 100)</li> <li>• Identify odd and even numbers (to 100)</li> <li>• Recognize fractions as parts of a whole or parts of a group to (12 parts)</li> <li>• Recognize, name and compare the unit fractions , , , , , , , </li> <li>• Know that, when all fractional parts are included, the result is equal to the whole and to one.</li> <li>• Collect/record numerical data in systematic ways</li> <li>• Represent, compare and interpret data using tables, tally charts, and bar graphs.</li> <li>• Model addition of numbers less than 100 with objects and pictures</li> <li>• Add two whole numbers less than 100 with and without regrouping</li> <li>• Understand and use the inverse relationship between addition and subtraction</li> <li>• Use estimation to decide whether answers are reasonable in addition problems</li> <li>• Use mental arithmetic to add or subtract 0, 1, 2, 3, 4, 5, or 10 with numbers less than 100</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Have a well developed number sense (mathematics, estimation, reasonableness of results)</li> <li>• Understand number concepts, operations and properties (including basic number theory)</li> <li>• Understand algorithms and place value</li> <li>• Extend number systems from whole numbers to fractions and integers, rational and real numbers</li> <li>• Extend operations, properties and ordering</li> <li>• Notation of fractions, decimals, percents, ratio and proportion</li> </ul>
--	---	--

<p><b><u>Standard 2. COMPUTATION</u></b></p> <p>Students solve simple problems involving addition and subtraction of numbers up to 100.</p>	<p><b>COMPUTATION</b></p> <ul style="list-style-type: none"> <li>• Model addition of numbers less than 100 with objects and pictures</li> <li>• Add two whole numbers less than 100 with and without regrouping</li> <li>• Understand and use the inverse relationship between addition and subtraction</li> <li>• Use estimation to decide whether answers are reasonable in addition problems</li> <li>• Use mental arithmetic to add or subtract 0, 1, 2, 3, 4, 5, or 10 with numbers less than 100</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Develop mathematical language and symbolism and how we communicate mathematical ideas</li> <li>• Represent and solve problems requiring the use of variables</li> <li>• Understand concepts of functions and their use</li> <li>• Understand different representations of functions (tubular, graphical, symbolic, verbal)</li> <li>• Distinguish between continuous and discrete approaches</li> </ul>
<p><b><u>Standard 3. ALGEBRA AND FUNCTIONS</u></b></p> <p>Students model, represent, and interpret number relationships to create and solve problems involving addition and subtraction.</p>	<p><b>ALGEBRA AND FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Relate problem situations to number sentences involving addition and subtraction</li> <li>• Use the commutative and associative rules for addition to simplify mental calculations and to check results.</li> <li>• Recognize and extend a linear pattern by rules</li> <li>• Create, describe, and extend number patterns using addition and subtraction</li> </ul>	<p><b>ALGEBRA and FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Extend system of real numbers to complex numbers</li> <li>• Understand clock arithmetic</li> <li>• Understand modular systems</li> <li>• Understand matrices</li> <li>• Understand solutions of systems of equations</li> </ul>
<p><b><u>Standard 4. GEOMETRY</u></b></p> <p>Students identify and describe the attributes of common shapes in the plane and of common objects in space.</p>	<p><b>GEOMETRY</b></p> <ul style="list-style-type: none"> <li>• Construct squares, rectangles, triangles, cubes, and rectangular prisms with appropriate materials.</li> <li>• Describe, classify, and sort plane and solid geometric shapes (triangle, square, rectangle, cube, rectangular prism) according to the number and shape of faces, and the number of edges and vertices</li> <li>• Investigate and predict the result of putting together and taking apart two and three-dimensional shapes</li> <li>• Identify congruent two-dimensional shapes in any position</li> <li>• Recognize geometric shapes and structures in the environment and specify their locations</li> </ul>	<p><b>GEOMETRY</b></p> <ul style="list-style-type: none"> <li>• Understand how geometry is used to describe the world in which we live</li> <li>• Analysis of 2- and 3- dimensional figures <ul style="list-style-type: none"> <li>* Tessellations</li> <li>* Symmetry</li> <li>* Polygons</li> <li>* Polyhedra</li> <li>* Curved shapes</li> </ul> </li> <li>• Understand synthetic geometry</li> <li>• Understand coordinate geometry</li> <li>• Understand transformational geometry</li> <li>• Build justifications and coherent arguments</li> <li>• Understand spatial visualization</li> </ul>

<p><b>Standard 5. MEASUREMENT</b></p> <p>Students understand how to measure length, temperature, capacity, weight, and time in standard units.</p>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Measure and estimate length to the nearest inch, foot, yard, meter and centimeter,</li> <li>• Describe the relationships among inch, foot, and yard; meter and centimeter</li> <li>• Decide which unit of length is most appropriate in a given situation</li> <li>• Estimate area and use a given object to measure the area of other objects</li> <li>• Estimate and measure capacity using cups and pints</li> <li>• Estimate weight and use a given object to measure the weight of other objects</li> <li>• Recognize the need for a fixed unit of weight</li> <li>• Estimate temperature. Read a thermometer in Celsius and Fahrenheit</li> <li>• Tell time to the nearest quarter hour; be able to tell 5-minute intervals and differentiate a.m./p.m.</li> <li>• Know relationships of time</li> <li>• Find the duration of time intervals</li> <li>• Find value of a collection of coins</li> </ul>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Understand the historical perspective</li> <li>• Understand the attributes of: <ul style="list-style-type: none"> <li>* Length</li> <li>* Area</li> <li>* Volume</li> <li>* Capacity</li> <li>* Time</li> <li>* Temperature</li> <li>* Angles</li> <li>* Weight</li> <li>* Mass</li> </ul> </li> <li>• Differentiate units to record measure from the process of measurement itself</li> <li>• Understand estimation</li> <li>• Understand the metric system</li> <li>• Understand formulas for perimeter, area, and volume</li> </ul>
<p><b>Standard 6: PROBLEM SOLVING</b></p> <p>Students make decisions about how to set up a problem. Students solve problems and justify their reasoning</p>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Choose the approach, materials, and strategies to use in solving problems</li> <li>• Use tools such as objects or drawings to model problems</li> <li>• Explain the reasoning and justify the procedures selected in solving a problem</li> <li>• Make precise calculations and check the validity of the results in the context of the problem</li> <li>• Understand and use connections between two problems</li> </ul>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use mathematical inquiry including: <ul style="list-style-type: none"> <li>* Questioning techniques</li> <li>* Discovery</li> <li>* Reasoning processes</li> <li>* Alternative strategies</li> <li>* Technology</li> <li>* Reflective processes</li> <li>* Analysis and justification</li> <li>* Formulating the problem</li> </ul> </li> </ul>

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**3<sup>rd</sup> Grade Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. NUMBER SENSE</u></b></p> <p>Students understand the relationships among numbers, quantities, and place value in whole numbers up to 1,000. They understand the relationship among whole numbers, simple fractions and decimals.</p>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Count, read and write whole numbers (to 1000)</li> <li>• Identify and interpret place value in whole numbers (to 1000)</li> <li>• Use words, models and expanded form to represent numbers to 1000</li> <li>• Identify any number to 1000 in various combinations of hundreds, tens, and ones.</li> <li>• Compare whole numbers to 1000 and arrange them in numerical order</li> <li>• Round numbers less than 1000 to the nearest ten and the nearest hundred</li> <li>• Identify odd and even numbers to 1000 and describe their characteristics</li> <li>• Show equivalent fractions using equal parts</li> <li>• Identify and use correct names for numerators and denominators</li> <li>• Given a pair of fractions, decide which is larger or smaller by using objects or pictures</li> <li>• Given a set of objects or a picture, name and write a decimal to represent tenths and hundredths</li> <li>• Given a decimal for tenths, show it as a fraction using a place-value model</li> <li>• Interpret data displayed in a circle graph and answer questions about the situation</li> <li>• Identify whether everyday events are certain, likely, unlikely, or impossible</li> <li>• Record the possible outcomes for a simple probability experiment</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Have a well developed number sense (mathematics, estimation, reasonableness of results)</li> <li>• Understand number concepts, operations and properties (including basic number theory)</li> <li>• Understand algorithms and place value</li> <li>• Extend number systems from whole numbers to fractions and integers, rational and real numbers</li> <li>• Extend operations, properties and ordering</li> <li>• Notation of fractions, decimals, percents, ratio and proportion</li> </ul>
--	--	--

<p><b><u>Standard 2. COMPUTATION</u></b></p> <p>Students solve problems involving addition and subtraction of whole numbers. They model and solve simple problems involving multiplication and division.</p>	<p><b>COMPUTATION</b></p> <ul style="list-style-type: none"> <li>• Add and subtract whole numbers up to 1,000 with or without regrouping using relevant properties of the number system</li> <li>• Represent the concept of multiplication as repeated addition</li> <li>• Represent the concept of division as repeated subtraction, equal sharing, and forming equal groups</li> <li>• Know and use the inverse relationship between multiplication and division facts</li> <li>• Show mastery of multiplication facts for 2, 5, and 10</li> <li>• Add and subtract simple fractions with the same denominator</li> <li>• Use estimation to decide whether answers are reasonable in + and – problems</li> <li>• Use mental arithmetic to add or subtract with numbers less than 100.</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Develop mathematical language and symbolism and how we communicate mathematical ideas</li> <li>• Represent and solve problems requiring the use of variables</li> <li>• Understand concepts of functions and their use</li> <li>• Understand different representations of functions (tubular, graphical, symbolic, verbal)</li> <li>• Distinguish between continuous and discrete approaches</li> </ul>
<p><b><u>Standard 3. ALGEBRA AND FUNCTIONS</u></b></p> <p>Students select appropriate symbols, operations, and properties to represent, describe, simplify, and solve simple number and functional relationships.</p>	<p><b>ALGEBRA AND FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Represent relationships of quantities in the form of a numeric expression or equation</li> <li>• Solve problems involving numeric equations</li> <li>• Choose appropriate symbols for operations and relations to make a number sentence true</li> <li>• Understand and use the commutative and associative rules of multiplication</li> <li>• Create, describe, and extend number patterns using multiplication</li> <li>• Solve simple problems involving a functional relationship between two quantities</li> <li>• Plot and label whole numbers on a number line up to 10</li> </ul>	<p><b>ALGEBRA and FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Extend system of real numbers to complex numbers</li> <li>• Understand clock arithmetic</li> <li>• Understand modular systems</li> <li>• Understand matrices</li> <li>• Understand solutions of systems of equations</li> </ul>

<p><b><u>Standard 4. GEOMETRY</u></b></p> <p>Students describe and compare the attributes of plane and solid geometric shapes and use their understanding to show relationships and solve problems.</p>	<p><b>GEOMETRY</b></p> <ul style="list-style-type: none"> <li>• Identify quadrilaterals as four-sided shapes</li> <li>• Identify right angles in shapes and objects and decide whether other angles are greater than or less than a right angle.</li> <li>• Identify, describe, and classify: cube, sphere, prism, pyramid, cone, cylinder</li> <li>• Identify common solid objects that are the parts needed to make a more complex solid object</li> <li>• Draw a shape that is congruent to another shape</li> <li>• Use the terms point, line, and line segment in describing two-dimensional shapes</li> <li>• Draw a line segment and lines</li> <li>• Identify and draw lines of symmetry in geometric shapes (by hand or using technology)</li> <li>• Sketch the mirror image reflections of shapes</li> <li>• Recognize geometric shapes and their properties in the environment and specify their locations</li> </ul>	<p><b>GEOMETRY</b></p> <ul style="list-style-type: none"> <li>• Understand how geometry is used to describe the world in which we live</li> <li>• Analysis of 2- and 3- dimensional figures <ul style="list-style-type: none"> <li>* Tessellations</li> <li>* Symmetry</li> <li>* Polygons</li> <li>* Polyhedra</li> <li>* Curved shapes</li> </ul> </li> <li>• Understand synthetic geometry</li> <li>• Understand coordinate geometry</li> <li>• Understand transformational geometry</li> <li>• Build justifications and coherent arguments</li> <li>• Understand spatial visualization</li> </ul>
<p><b><u>Standard 5. MEASUREMENT</u></b></p> <p>Students choose and use appropriate units and measurement tools for length, capacity, weight, temperature, time and money.</p>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Measure line segments to the nearest half-inch</li> <li>• Add units of length that may require regrouping of inches to feet or centimeters to meters.</li> <li>• Find the perimeter of a polygon</li> <li>• Estimate or find the area of shapes by covering them with squares</li> <li>• Estimate or find the volume of objects by counting the number of cubes that would fill them</li> <li>• Estimate and measure capacity using quarts, gallons and liters.</li> <li>• Estimate and measure weight using pounds and kilograms</li> <li>• Compare temperatures in Celsius and Fahrenheit</li> <li>• Find the value of any collection of coins and bills. Write amounts less than a dollar using the ¢ symbol</li> </ul>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Understand the historical perspective</li> <li>• Understand the attributes of: <ul style="list-style-type: none"> <li>* Length</li> <li>* Area</li> <li>* Volume</li> <li>* Capacity</li> <li>* Time</li> <li>* Temperature</li> <li>* Angles</li> <li>* Weight</li> <li>* Mass</li> </ul> </li> <li>• Differentiate units to record measure from the process of measurement itself</li> <li>• Understand estimation</li> <li>• Understand the metric system</li> </ul>

<p><b>Standard 6: PROBLEM SOLVING</b></p> <p>Students make decisions about how to approach problems and communicate their ideas. Students use strategies, skills, and concepts in finding and communicating solutions to problems. Students determine when a solution is complete and reasonable and move beyond a particular problem by generalizing to other situations.</p>	<p>and write larger amounts in decimal notation using the \$ symbol</p> <ul style="list-style-type: none"> <li>• Use play or real money to decide whether there is enough money to make a purchase</li> <li>• Carry out simple unit conversions within a measurement system (e.g. centimeters to meters, hours to minutes)</li> </ul> <p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Analyze problems by identifying relationships, telling relevant from irrelevant information, sequencing and prioritizing information, and observing patterns.</li> <li>• Decide when and how to break a problem into simpler parts</li> <li>• Apply strategies and results from simpler problems to solve complex problems</li> <li>• Express solutions clearly and logically by using the appropriate mathematical terms and notation. ### **Standard 3. ALGEBRA AND FUNCTIONS**

Students use variables in simple expressions, compute the value of an expression for specific values of the variable, and plot and interpret the results. They use two-dimensional coordinate grids to represent points and graph lines.

## Standard 4. GEOMETRY

Students identify, describe, and classify the properties of plane and solid geometric shapes and the relationships between them.

---

ALGEBRA AND FUNCTIONS

- Develop further the fundamental concept of a variable
  - Use a letter to stand for all numbers of a certain kind
  - Write simple algebraic expressions
  - Evaluate simple algebraic expressions
- Begin to develop the idea of linking an algebraic equation to a graph
- Find ordered pairs that fit a linear equation
  - Plot ordered pairs as points on a grid, and drawing the resulting straight line
  - Interpret graphs to answer questions

# GEOMETRY

- Draw angles, parallel and perpendicular lines
- Identify radius and diameter of circles
- Describe geometric shapes, using ruler, compass, protractor, and computer drawing programs
- Identify congruent triangles
- Explain congruent triangle reasoning using specific geometrical terms
- Understand and use terms such as equilateral, isosceles, acute, and obtuse
- Classify polygons with five or more sides
- Develop an understanding of reflectional and rotational symmetry
- Construct prisms and pyramids
- Develop an ability to work in three dimensions
- Develop and see the formulas for calculating perimeters and areas of triangles, parallelograms, and trapezoids

## NUMBER SYSTEMS AND ALGEBRAIC STRUCTURES

- The system of real numbers should be extended to complex numbers
- Investigate selected algebraic structures
- Provide concrete examples such as clock arithmetic, modular systems, and matrices
- Understand properties of the operation in these structures
- Investigate how these structures are reflected in the number systems of school mathematics
- Use of matrices and matrix operations to record information and to deal with solutions of systems of equations

## GEOMETRY

- Understand how geometry is used to describe the world in which we live
- Understand that geometry can be used to solve real-world problems
- Analyze two- and three- dimensional figures
- Include the study of tessellations, symmetry, polygons, polyhedra, and curved shapes
- Use synthetic, coordinate, and transformational geometry
- Solve problems and hone skills in building justifications and coherent arguments for the plausibility of conjectures
- Emphasize spatial visualization

<p><b><u>Standard 5. MEASUREMENT</u></b></p> <p>Students understand and compute the areas and volumes of simple objects, as well as measuring weight, temperature, time, and money.</p>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Develop and see the formulas for calculating perimeters and areas of triangles, parallelograms, and trapezoids</li> <li>• Extend these ideas to finding the volume and surface area of rectangular solids</li> <li>• Understand and use additional units for measuring weight: ounce, gram, and ton</li> <li>• Add and subtract with money in decimal notation</li> </ul>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Understand measurement needs to be understood from the perspective of its historical development</li> <li>• Know that attributes of what we measure include length, area, volume, capacity, time, temperature, angles, weight, and mass</li> <li>• Understand that the units to record measure are different from the process of measurement itself</li> <li>• Ideas are reinforced through varied experience, using both standard and nonstandard units</li> <li>• Learn to estimate lengths, areas, etc.</li> <li>• Know the System International d’Units (the metric system)</li> <li>• Derivations of the formulas for the perimeter, area, and volume of common figures should be approached through meaningful explorations</li> <li>• Indirect measurement and its many applications should be studied</li> </ul>
<p><b>Standard 6. DATA ANALYSIS AND PROBABILITY</b></p> <p>Students collect, display, analyze, compare, and interpret data sets. They use the results of probability experiments to predict future events.</p>	<p><b>DATA ANYALYSIS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Explain which types of displays are appropriate for various sets of data</li> <li>• Find the mean, median, mode, and range of a set of data which describe what each does and does not tell about the data set.</li> <li>• Understand that probability can take any value between 0 and 1</li> <li>• Express outcomes of experimental probability</li> </ul>	<p><b>STATISTICS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Understand variety of experiences in the collection, organization, representation, and analysis, and interpretation of data</li> <li>• Understand measures of central tendency, measures of variation (range, standard deviation, interquartile range, and outliers), and general distributions</li> </ul>

<p><b>Standard 7: PROBLEM SOLVING</b></p> <p>Students make decisions about how to approach problems and communicate their ideas. They use strategies, skills, and concepts in finding and communicating solutions to problems. They determine when a solution is complete and reasonable and move beyond a particular problem by generalizing to other situations.</p>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Choose how to approach a problem</li> <li>• Explain the reasoning, and check results</li> <li>• Develop skills with algebra, geometry, or measurement</li> <li>• Move from simple to more complex ideas by taking logical steps that build a better understanding of mathematics</li> </ul>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Understand questioning techniques which include: <ul style="list-style-type: none"> <li>* Discovery</li> <li>* Reasoning processes</li> <li>* Alternative strategies</li> <li>* Technology</li> <li>* Reflective processes</li> <li>* Analysis and justification</li> <li>* Formulating the problem</li> </ul> </li> </ul>

Analyze ways in which wording of</li> </ul>	<p><b>STATISTICS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Experience in collecting, organizing, representing, analyzing, and interpreting data</li> <li>• Understand statistical concepts of measures of central tendency, measures of variation, and general distribution</li> <li>• Know how to represent data in various graphs including bar, line, circle and pictographs, line plots, stem-and-leaf plots, box plots, histograms, scatter</li> </ul>

<p>use them to make predictions about events.</p>	<p>questions can influence survey results</p> <ul style="list-style-type: none"> <li>• Know that if <math>P</math> is the probability of an event occurring then <math>1-P</math> is the probability of that event not occurring</li> <li>• Understand that the probability of either one or the other of two disjointed events occurring is the sum of the two individual probabilities</li> <li>• Find the number of possible arrangements of several objects using a tree diagram</li> </ul>	<p>plots</p> <ul style="list-style-type: none"> <li>• Understand probability of simple and compound events and its use in quantifying uncertainty</li> <li>• Provide opportunities to explore empirical probability from simulations and from data collected and analyzation of theoretical probability on the basis of a description of the underlying sample space</li> <li>• Use of probability trees and simulations using objects such as spinners, dice, slips of paper, etc. to solve problems</li> </ul>
<p><b><u>Standard 7: PROBLEM SOLVING</u></b></p> <p>Students make decisions about how to approach problems and communicate their ideas. They use strategies, skills, and concepts in finding and communicating solutions to problems. They determine when a solution is complete and reasonable and move beyond a particular problem by generalizing to other situations.</p>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Analyze problems by identifying relationships, telling relevant from irrelevant information, identifying missing information, sequencing and prioritizing information, and observing patterns</li> <li>• Make and justify mathematical conjectures based on a general description of a mathematical question or problem</li> <li>• Decide when and how to divide a problem into simpler parts</li> <li>• Apply strategies and results from simpler problems to more complex problems</li> <li>• Make and test conjectures by using inductive reasoning</li> <li>• Express the solution clearly and logically by using the appropriate mathematical terms and notation, support solutions with evidence in both verbal and symbolic work</li> <li>• Recognize the relative advantages of exact and approximate solutions, give answers to a specified degree of accuracy</li> <li>• Select and apply appropriate methods for estimating results of rational-number computations</li> </ul>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use instructional strategies to encourage student's development of critical thinking, problem solving, and performance skills</li> <li>• Understand problem solving and the reasoning process as the basis for mathematical inquiry</li> </ul>

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

8 <sup>th</sup> Grade Student Standard		Teacher Preparation Standard	
<p><b><u>Standard 1. NUMBER SENSE</u></b></p> <p>Students know the properties of rational and irrational numbers expressed in a variety of forms. They understand and use exponents, powers, and roots.</p>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Read, write, compare, solve problems using decimals in scientific notation</li> <li>• Know that every rational number is either a terminating or repeating decimal and every irrational number is a non-repeating decimal</li> <li>• Understand computations with an irrational number and a rational number (other than zero) produce an irrational number</li> <li>• Understand and evaluate negative integer exponents</li> <li>• Use laws of exponents for integer exponents</li> <li>• Use inverse relationship between squaring and finding the square root of perfect integers</li> <li>• Calculate and find approximations of square roots</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Understand number sense</li> <li>• Understand mathematics concepts</li> <li>• Understand estimation</li> <li>• Explain reasonableness of results</li> <li>• Understand the use of number concepts, operations, and properties</li> <li>• Understand basic number theory</li> <li>• Understand the role of algorithms</li> <li>• Understand place value</li> <li>• Extend number systems from the whole numbers to fractions and integers</li> <li>• Understand rational and real numbers</li> <li>• Discuss the extension of the operations, properties, and ordering</li> <li>• Understand notions of fractions, decimals, percents, ratio and proportion</li> </ul>	<p><b>NUMBER SENSE</b></p> <ul style="list-style-type: none"> <li>• Number sense</li> <li>• Mathematics concepts</li> <li>• Estimation</li> <li>• Reasonableness of results</li> <li>• Understand the use of number concepts, operations, and properties</li> <li>• Basic number theory</li> <li>• Role of algorithms</li> <li>• Place value</li> <li>• Extend number systems from the whole numbers to fractions and integers</li> <li>• Rational and real numbers</li> <li>• Discussion of the extension of the operations, properties, and ordering</li> <li>• Notions of fractions, decimals, percents, ratio and proportion</li> </ul>
<p><b><u>Standard 2. COMPUTATION</u></b></p> <p>Students compute with rational numbers expressed in a variety of forms. They solve problems involving ratios, proportions, and percentages.</p>	<p><b>COMPUTATION</b></p> <ul style="list-style-type: none"> <li>• Add, subtract, multiply, divide rational numbers in multi-step problems (integers, fractions, terminating decimals)</li> <li>• Compute simple and compound interest</li> <li>• Use estimation techniques to reasonableness of answers computed on a calculator</li> <li>• Use mental arithmetic to compute common fractions, decimals, powers, and percents</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Experience development of mathematical language and symbolism and how these influence the way we communicate mathematical ideas</li> <li>• Experience representing and solving problems requiring use of variables</li> <li>• Have basic understanding of concepts of functions and use in growth of mathematical ideas</li> <li>• Understand different representations of functions (tabular, graphical, symbolic, verbal); movement among these representations; strengths and limitations of each fundamental</li> <li>• Know distinction between continuous and discrete approaches in solution of mathematical problems</li> </ul>	<p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Experience development of mathematical language and symbolism and how these influence the way we communicate mathematical ideas</li> <li>• Experience representing and solving problems requiring use of variables</li> <li>• Basic understanding of concepts of functions and use in growth of mathematical ideas</li> <li>• Understand different representations of functions (tabular, graphical, symbolic, verbal); movement among these representations; strengths and limitations of each fundamental</li> <li>• Distinction between continuous and discrete approaches in solution of mathematical problems</li> </ul>

<p><b><u>Standard 3. ALGEBRA AND FUNCTIONS</u></b></p> <p>Students solve simple linear equations and inequalities. They interpret and evaluate expressions involving integer powers. They graph and interpret functions. They understand the concepts of slope and rate.</p>	<p>ALGEBRA AND FUNCTIONS</p> <ul style="list-style-type: none"> <li>• Write and solve linear equations and inequalities in one variable, interpret solution in context, verify reasonableness of results</li> <li>• Solve systems of two linear equations using substitution methods, identify solution graphically</li> <li>• Interpret positive integer powers as repeated multiplication and negative integer powers as repeated division</li> <li>• Use correct order of operations to find values of algebraic expressions involving powers</li> <li>• Identify and graph linear functions, identify lines with positive and negative slope</li> <li>• Find slope of a linear function given the equation, write the equation given the slope and any point on the line</li> <li>• Demonstrate an understanding of rate as a measure of one quantity with respect to another quantity</li> <li>• Demonstrate understanding of relationships among tables, equations, verbal expressions, and graphs of linear functions</li> <li>• Represent simple quadratic functions using verbal descriptions, tables, graphs, formulas, and translate among these representations</li> <li>• Graph functions of the form <math>y=2x_2</math> and <math>y=2x_3</math>, describe similarities and differences in the graphs</li> </ul>	<p>NUMBER SYSTEM AND ALGEBRAIC STRUCTURES</p> <ul style="list-style-type: none"> <li>• System of real numbers should be extended to complex numbers</li> <li>• Investigations of algebraic structures should include concrete examples such as clock arithmetic, modular systems, and matrices</li> <li>• Use of matrices and matrix operations to record information and deal with solutions of systems of equations</li> </ul>	<p>ALGEBRA AND FUNCTIONS</p> <ul style="list-style-type: none"> <li>• System of real numbers should be extended to complex numbers</li> <li>• Investigations of algebraic structures should include concrete examples such as clock arithmetic, modular systems, and matrices</li> <li>• Use of matrices and matrix operations to record information and deal with solutions of systems of equations</li> </ul>
<p><b><u>Standard 4. GEOMETRY</u></b></p> <p>Students deepen their understanding of plane and solid geometric shapes by constructing shapes that meet given conditions, by identifying attributes of shapes, and by applying geometric concepts</p>	<p>GEOMETRY</p> <ul style="list-style-type: none"> <li>• Identify and describe basic properties of geometric shapes: altitudes, diagonals, angle bisectors, perpendicular bisectors, central angles, radii, diameters, and chords of circles</li> <li>• Perform simple constructions such as bisectors of segments and angles, copies of segments and angles, and perpendicular segments, describe and justify the</li> </ul>	<p>GEOMETRY</p> <ul style="list-style-type: none"> <li>• Understand how geometry is used to describe the world in which we live</li> <li>• Analyze 2- and 3- dimensional figures</li> <li>• Include the study of tessellations, symmetry, polygons, polyhedra, and curved shapes,</li> <li>• Include the study of synthetic geometry, coordinate geometry, transformational geometry</li> </ul>	<p>GEOMETRY</p> <ul style="list-style-type: none"> <li>• Understand how geometry is used to describe the world in which we live</li> <li>• Analyze 2- and 3- dimensional figures</li> <li>• Include the study of tessellations, symmetry, polygons, polyhedra, and curved shapes,</li> <li>• Include the study of synthetic geometry, coordinate geometry, transformational geometry</li> </ul>

to solve problems.	<ul style="list-style-type: none"> <li>• constructions</li> <li>• Identify properties of three-dimensional geometric objects, describe how two or more figures intersect in a plane or in space</li> <li>• Draw the translation, rotation, reflection, and dilation of shapes</li> <li>• Use the Pythagorean Theorem and its converse to solve problems in two and three dimensions</li> </ul>	<ul style="list-style-type: none"> <li>• Build justifications and coherent arguments</li> <li>• Understand spatial visualization</li> </ul>	<ul style="list-style-type: none"> <li>• Curved shapes</li> <li>• Synthetic geometry</li> <li>• Coordinate geometry</li> <li>• Transformations</li> <li>• Build justifications</li> <li>• Spatial visualization</li> </ul>
<p><b><u>Standard 5. MEASUREMENT</u></b></p> <p>Students convert between units of measure and use rates and scale factors to solve problems. They compute the perimeter, area, and volume of geometric objects. They investigate how perimeter, area, and volume are affected by changes of scale.</p>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Convert common measurements for length, area, volume, weight, capacity, and time to equivalent measurements within the same system</li> <li>• Solve simple problems involving rates and derived measurements for such attributes as velocity and density</li> <li>• Solve problems involving scale factors, area, and volume, using ratio and proportion</li> <li>• Use formulas for finding perimeter and area of two-dimensional shapes and surface area and volume of three-dimensional shapes, including rectangles, parallelograms, trapezoids, triangles, circles, prisms, cylinders, and pyramids</li> <li>• Estimate and compute area and volume of irregular two-and three -dimensional shapes by breaking them into more basic geometric objects</li> </ul>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Understand measurement from the perspective of historical development</li> <li>• Know that what we measure includes length, area, volume, capacity, time, temperature, angles, weight, and mass</li> <li>• Understand that units to record measurements are different from the process of measurement</li> <li>• Reinforce ideas through varied experiences using both standard and nonstandard units</li> <li>• Estimation of measurement should be understood and practiced</li> <li>• Understand the system International d'Units (metric system)</li> <li>• Understand the derivations of formulas for perimeter, area and volume</li> <li>• Indirect measurement and its many applications should be understood</li> </ul>	<p><b>MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Understand measurement from the perspective of historical development</li> <li>• What we measure includes length, area, volume, capacity, time, temperature, angles, weight, and mass</li> <li>• Understand that units to record measurements are different from the process of measurement</li> <li>• Reinforce ideas through varied experiences using both standard and nonstandard units</li> <li>• Estimation of measurement should be understood and practiced</li> <li>• Understand the system International d'Units (metric system)</li> <li>• Understand the derivations of formulas for perimeter, area and volume</li> <li>• Indirect measurement and its many applications should be understood</li> </ul>
<p><b><u>Standard 6. DATA ANALYSIS AND PROBABILITY</u></b></p> <p>Students collect, organize, represent, and interpret relationships in data sets that have one or more variables. They</p>	<p><b>DATA ANALYSIS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Identify claims based on statistical data, evaluate the reasonableness of the claim, design a study to investigate the claim</li> <li>• Identify different methods of selecting samples, analyze strengths, analyze strengths and weaknesses</li> </ul>	<p><b>STATISTICS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Experience in collecting, organizing, representing, analyzing, and interpreting data</li> <li>• Understand statistical concepts of measures of central tendency, measures of variation, and general distribution</li> </ul>	<p><b>STATISTICS AND PROBABILITY</b></p> <ul style="list-style-type: none"> <li>• Experience in collecting, organizing, representing, analyzing, and interpreting data</li> <li>• Understand statistical concepts of measures of central tendency, measures of variation, and general distribution</li> <li>• Know how to use statistical data to make decisions</li> </ul>

<p>determine probabilities and use them to make predictions about events.</p>	<p>of each method and the possible bias in a sample</p> <ul style="list-style-type: none"> <li>• Understand the meaning of, and be able to identify or compute the minimum, the lower quartile, the median, the upper quartile, the inter-quartile range, and the maximum of a data set</li> <li>• Analyze, interpret, and display single- and two-variable data in appropriate bar, line and circle graphs, stem-and leaf plots and box-and whisker plots, explain which type of display are appropriate for various data sets</li> <li>• Represent two-variable data with a scatter plot on the coordinate plane, describe how the data points are distributed, if it appears to be linear, draw a line that appears to best fit the data, write the equation on that line</li> <li>• Understand and recognize equally likely events</li> <li>• Find the number of possible arrangements of several objects by using the Basic Counting principle</li> </ul>	<ul style="list-style-type: none"> <li>• Know how to represent data in various graphs including bar, line, circle and pictographs, line plots, stem-and-leaf plots, box plots, histograms, scatter plots</li> <li>• Understand probability of simple and compound events and its use in quantifying uncertainty</li> <li>• Provide opportunities to explore empirical probability from simulations and from data collected and analyzation of theoretical probability on the basis of a description of the underlying sample space</li> <li>• Use of probability trees and simulations using objects such as spinners, dice, slips of paper, etc. to solve problems</li> </ul>	<p>including b stem-and-le plots</p> <ul style="list-style-type: none"> <li>• Understand events and</li> <li>• Opportunities simulations theoretical the underly</li> <li>• Use of prob such as spin problems</li> </ul>
<p><b><u>Standard 7: PROBLEM SOLVING</u></b></p> <p>Students make decisions about how to approach problems and communicate their ideas. They use strategies, skills, and concepts in finding and communicating solutions to problems. They determine when a solution is complete and reasonable and move beyond a particular problem by generalizing to other situations.</p>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use graphing to estimate solutions and check estimates with analytic approaches</li> <li>• Make precise calculations and check the validity of the results in the context of the problem</li> <li>• Decide whether a solution is reasonable in the context of the original situation</li> <li>• Note the method of finding the solution and show a conceptual understanding of the method by solving similar problems</li> </ul>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use instructional strategies to encourage student's development of critical thinking, problem solving, and performance skills</li> <li>• Understand problem solving and the reasoning process as the basis for mathematical inquiry</li> </ul>	<p><b>PROBLEM SOLVING</b></p> <ul style="list-style-type: none"> <li>• Use of instr developmen performanc</li> <li>• Understand as the basis</li> </ul>

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**PRE-CALCULUS  
Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. RELATIONS and FUNCTIONS</u></b></p> <p>Students use polynomial, rational, and algebraic functions to write functions and draw graphs to solve word problems, to find composite and inverse functions, and to analyze functions and graphs. They analyze and graph circles, ellipses, parabolas, and hyperbolas.</p> <p><b><u>Standard 2. LOGARITHMIC AND EXPONENTIAL FUNCTIONS</u></b></p> <p>Students solve word problems involving logarithmic and exponential functions. They draw and analyze graphs, and find inverse functions.</p> <p><b><u>Standard 3. TRIGONOMETRY in TRIANGLES</u></b></p> <p>Students define trigonometric functions using right triangles. They solve word problems/apply the laws of sines and cosines.</p>	<p><b>RELATIONS AND FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Use polynomial, rational, and algebraic functions to write functions and draw graphs</li> <li>• Find composite and inverse functions</li> <li>• Analyze conic sections</li> <li>• Use the concepts of point and line symmetry</li> <li>• Solve word problems using functions and equations</li> </ul> <p><b>LOGARITHMIC AND EXPONENTIAL FUNCTION</b></p> <ul style="list-style-type: none"> <li>• Solve word problems involving logarithmic &amp; exponential functions</li> <li>• Graph logarithmic &amp; exponential functions and their inverses</li> <li>• Find domain, range, intercepts, and asymptotes of logarithmic and exponential functions</li> </ul> <p><b>TRIGONOMETRY IN TRIANGLES</b></p> <ul style="list-style-type: none"> <li>• Define trigonometric functions using right triangles</li> <li>• Solve word problems using the law of sines and cosines</li> <li>• Calculate the area of a triangles given two sides and the angle between them</li> </ul>	<p><b>FUNCTIONS AND RELATIONS</b></p> <ul style="list-style-type: none"> <li>• Understand different representations of functions</li> <li>• Understand the concepts of relations and functions and their use in the growth of mathematical ideas</li> <li>• Understand the operations of functions</li> </ul> <p><b>FUNCTIONS AND USE OF VARIABLES</b></p> <ul style="list-style-type: none"> <li>• Experience representing and solving problems requiring the use of logarithms and exponentials</li> <li>• Understand the concepts of relations, functions, their graphs and their use in the growth of mathematical ideas</li> </ul> <p><b>GEOMETRY AND MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Use trigonometric concepts to analyze triangular shapes</li> <li>• Use trigonometry to calculate the area of geometric shapes</li> </ul>
---	---	--

<p><b><u>Standard 4. TRIGONOMETRIC FUNCTIONS</u></b></p> <p>Students define trigonometric functions using the unit circle and use degrees and radians. They draw and analyze graphs, find inverse functions, and solve word problems.</p> <p><b><u>Standard 5. TRIGONOMETRIC IDENTITIES AND EQUATIONS</u></b></p> <p>Students prove trigonometric identities, solve trigonometric equations, and solve word problems.</p> <p><b><u>Standard 6. POLAR COORDINATES AND COMPLEX NUMBERS</u></b></p> <p>Students define polar coordinates and complex numbers and understand their connection with trigonometric functions.</p> <p><b><u>Standard 7. SEQUENCES and SERIES</u></b></p> <p>Students model data with linear and non-linear functions.</p>	<p><b>TRIGONOMETRIC FUNCTIONS</b></p> <ul style="list-style-type: none"> <li>• Define trigonometric functions using the unit circle, degrees, and radians</li> <li>• Graphs and analyze trigonometric functions and their inverses</li> <li>• Solve word problems using trigonometric functions</li> <li>• Convert degrees to radians</li> </ul> <p><b>TRIGONOMETRIC IDENTITIES AND EQUATIONS</b></p> <ul style="list-style-type: none"> <li>• Prove trigonometric identities</li> <li>• Solve trigonometric equations</li> </ul> <p><b>POLAR COORDINATES AND COMPLEX NUMBERS</b></p> <ul style="list-style-type: none"> <li>• Define polar coordinates using trigonometric functions</li> <li>• Define complex numbers using trigonometric functions</li> <li>• Graph relations using polar coordinates</li> </ul> <p><b>SEQUENCES AND SERIES</b></p> <ul style="list-style-type: none"> <li>• Define and use arithmetic &amp; geometric sequences and series</li> <li>• Understand the concept of limit</li> <li>• Use arithmetic &amp; geometric sequence &amp; series to</li> </ul>	<p><b>FUNCTIONS AND THEIR USE</b></p> <ul style="list-style-type: none"> <li>• Understand the concepts of trigonometric functions their graphs, and their use in the growth of mathematical ideas</li> <li>• Experience in representing and solving problems requiring the use of trigonometric functions</li> <li>• Understand different angular measuring systems</li> </ul> <p><b>GEOMETRY AND MEASUREMENT</b></p> <ul style="list-style-type: none"> <li>• Experience solving equations using trigonometry functions as variables</li> <li>• Extend and use the operations and properties of algebra to prove trigonometric identities</li> </ul> <p><b>NUMBER SYSTEMS, NUMBER THEORY, ALGEBRA AND LINEAR ALGEBRA</b></p> <ul style="list-style-type: none"> <li>• Study the system of complex numbers using polar representation</li> <li>• Study complex numbers as solutions to equations</li> </ul> <p><b>CALCULUS AND ANALYSIS</b></p> <ul style="list-style-type: none"> <li>• Have a firm grasp of the notion of limit</li> <li>• Understand development of mathematical language and symbolism</li> <li>• Understand the concept of sequence and series</li> </ul>

**STANDARDS ALIGNMENT OVERVIEW:** *What Indiana's students & teachers need to know and be able to do in Mathematics.*

## CALCULUS

### Student Standard

## Teacher Preparation Standard

<p><b><u>Standard 1. LIMITS AND CONTINUITY</u></b></p> <p>Students understand the concept of limit, find limits of functions at points and at infinity, decide if a function is continuous, and use continuity theorems.</p>	<p><b>LIMITS AND CONTINUITY</b></p> <ul style="list-style-type: none"> <li>• Understand concept of limit</li> <li>• Find limits at a point and at infinity</li> <li>• Decide if a function is continuous</li> <li>• Use continuity theorems</li> </ul>	<p><b>CALCULOUS AND ANALYSIS</b></p> <ul style="list-style-type: none"> <li>• Understand the concept and role of limits</li> <li>• Explain the concept of a limit</li> <li>• Find limits by substitution, factoring, canceling and rationalization methods</li> <li>• Find one-sided limits, limits at infinity and special limits</li> <li>• Understand the Intermediate Value Theorem and the Extreme Value Theorem</li> <li>• Understand the communicate analytically, graphically and numerically the mathematical language</li> <li>• Apply technology judiciously</li> </ul>
<p><b><u>Standard 2. DIFFERENTIAL CALCULUS</u></b></p> <p>Students find derivatives of algebraic, trigonometric, logarithmic, and exponential functions. They find derivatives of sums, products, and quotients, and composite and inverse functions. They find derivatives of higher order, and use logarithmic differentiation and the Mean Value Theorem.</p>	<p><b>DIFFERENTIAL CALCULUS</b></p> <ul style="list-style-type: none"> <li>• Find derivatives of algebraic, trigonometric, logarithmic and exponential functions</li> <li>• Find derivatives of sums, products, quotients and composites and inverse functions</li> <li>• Find derivatives of higher order functions</li> <li>• Use logarithmic differentiation</li> <li>• Use Mean Value Theorem</li> </ul>	<p><b>CONCEPTS OF CALCULUS</b></p> <ul style="list-style-type: none"> <li>• Find slope at a point on a curve</li> <li>• Find equation of a tangent line on a curve</li> <li>• Find slope, equation of tangent line, extrema, point of inflection and concavity</li> <li>• Understand the relationship between <math>f</math> and whether it is increasing or decreasing and the sign of <math>f'</math></li> <li>• Understand the relationship between the concavity of <math>f</math> and the sign of <math>f''</math></li> <li>• Sketch and analyze <math>f</math>, <math>f'</math>, and <math>f''</math></li> <li>• Use implicit differentiation to find the derivative of an inverse function</li> <li>• Solve optimization problems</li> <li>• Find, understand and interpret average rate of change, instantaneous rate of change, velocity and acceleration</li> </ul>

<p>Calculus to find integrals, and use basic properties of integrals. They integrate by substitution and find approximate integrals.</p>	<ul style="list-style-type: none"> <li>Find approximate integrals</li> </ul>	<p>Trapezoidal Rule, and technology, of functions represented algebraically, geometrically, and numerically.</p> <ul style="list-style-type: none"> <li>Understand that integration is used to find areas</li> <li>Understand that integration is the inverse operation of differentiation</li> <li>Use rectangular approximations to find approximate integral value</li> <li>Use left/right/mid-points of equal subdivisions to calculate Riemann sums</li> <li>Interpret the definite integral as a Riemann sum</li> <li>Understand and communicate analytically, graphically and numerically the mathematical language</li> <li>Apply technology judiciously.</li> </ul>
<p><b><u>Standard 5. APPLICATIONS of INTEGRATION</u></b></p> <p>Students find velocity functions and position functions from their derivatives, solve separable differential equations, and use definite integrals to find areas and volumes.</p>	<p>APPLICATIONS OF INTEGRATION</p> <ul style="list-style-type: none"> <li>Find velocity functions and position functions from their derivatives</li> <li>Solve separable differential equations</li> <li>Use definite integrals to find areas and volumes</li> </ul>	<p>CALCULUS AND ANALYSIS</p> <ul style="list-style-type: none"> <li>Find specific anti-derivatives using initial condition for acceleration, velocity, position, and motion along a line</li> <li>Solve and model separable differential equations</li> <li>Solve differential growth and decay problems <math>y' = ky</math></li> <li>Use definite integrals to find areas and volumes</li> <li>Find average value</li> <li>Use and understand the integral as an “accumulator”</li> <li>Understand and communicate the mathematical language analytically, graphically and numerically the mathematical language</li> <li>Apply technology judiciously</li> </ul>

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**PROBABILITY AND STATISTICS**

**Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. DESCRIPTIVE STATISTICS</u></b></p> <p>Students gather and display data, and use measures of central tendency and variability.</p>	<p>DESCRIPTIVE STATISTICS</p> <ul style="list-style-type: none"> <li>• Create, compare, and evaluate data displays using various methodologies *(histograms, scatter plots, cumulative distribution functions)</li> <li>• Calculate measures of central tendency *(various means, median, and mode) and measures of variations *(range, quartiles, variance, and standard deviation)</li> </ul>	<p>DESCRIPTIVE STATISTICS</p> <ul style="list-style-type: none"> <li>• Provide or have a variety of experiences in collecting, organizing, representing, analyzing and interpreting data</li> <li>• Know and understand the key statistical concepts concerning measures of central tendency and measures of variation</li> </ul>
<p><b><u>Standard 2. PROBABILITY</u></b></p> <p>Students solve problems involving the use of probability and probability distributions.</p>	<p>PROBABILITY</p> <ul style="list-style-type: none"> <li>• Apply the counting principle, permutations, and combinations in the context of real world situations</li> <li>• Develop rules for finding probabilities of combined and complementary events</li> <li>• Use and understand conditional probability *(ex: Bayes' Theorem)</li> <li>• Investigate probability distributions and be able to calculate their means and variances</li> <li>• Use and apply the normal distribution and the central limit theorem</li> </ul>	<p>PROBABILITY</p> <ul style="list-style-type: none"> <li>• Explore empirical probability from simulations and collected data</li> <li>• Analyze theoretical probability based on a description of an underlying sample space</li> <li>• Apply probability rules for simple and compound events</li> <li>• Use various probability rules to quantify uncertainty</li> </ul>
<p><b><u>Standard 3. STATISTICAL INFERENCE</u></b></p> <p>Students use confidence intervals and hypothesis tests, fit straight lines to data, and calculate correlation coefficients.</p>	<p>STATISTICAL INFERENCE</p> <ul style="list-style-type: none"> <li>• Calculate and use confidence intervals, hypothesis tests of means and differences between means</li> <li>• Use the principle of least squares to find curves of best fit</li> <li>• Calculate and interpret correlation coefficients</li> </ul>	<p>STATISTICAL INFERENCE</p> <ul style="list-style-type: none"> <li>• Use various techniques to examine the relationships between two variables including scatter plots and a means of approximating a line of best fit</li> <li>• Use discrete and continuous probability distributions to make inferences about populations</li> <li>• Be aware of misuses of statistics and common</li> </ul>

<p><b><u>Standard 4.</u></b>  <b><u>MATHEMATICAL</u></b>  <b><u>REASONING AND PROBLEM</u></b>  <b><u>SOLVING</u></b></p>	<p>MATHEMATICAL REASONING AND PROBLEM SOLVING</p> <ul style="list-style-type: none"> <li>• Use problem solving strategies to approach problem situations, explain reasoning, and to check reasonableness of answers</li> <li>• Use problem solving strategic and various techniques to investigate probability situations as applied to distributions, confidence intervals, and hypothesis tests</li> </ul>	<p>misconceptions of probability when making inferences</p> <ul style="list-style-type: none"> <li>• Use confidence intervals, hypothesis testing, correlations, and regression to make inferences</li> </ul> <p>MATHEMATICAL REASONING AND PROBLEM SOLVING</p> <ul style="list-style-type: none"> <li>• Provide opportunities to explore the power and use of simulations as a problem solving technique for making decisions based on uncertainty</li> <li>• Conduct experiments involving dice, spinners, random numbers, and computer programs to generate simulated probability and statistical situations</li> <li>• Explore other topics to stimulate problem solving and reasoning in probability and statistics (ex. fair games, expected values, odds, elementary counting techniques, conditional probability area models to represent geometric probability)</li> </ul>
--	--	---

**STANDARDS ALIGNMENT OVERVIEW: What Indiana's students & teachers need to know and be able to do in *Mathematics*.**

**DISCRETE MATH  
Student Standard**

**Teacher Preparation Standard**

<p><b><u>Standard 1. COUNTING TECHNIQUES</u></b></p> <p>Students use counting techniques.</p>	<p>COUNTING TECHNIQUES</p> <ul style="list-style-type: none"> <li>• Use varied representations to find outcomes.</li> <li>• Use the fundamental counting principle.</li> <li>• Use combinatorial reasoning to solve problems and find probabilities.</li> <li>• Use simulations to solve counting and probability problems.</li> </ul>	<p>COUNTING TECHNIQUES</p> <ul style="list-style-type: none"> <li>• Probability trees, elementary counting techniques, and simulations should be used to solve problems.</li> <li>• Should include an introduction to combinatorics.</li> <li>• Extensive experience using and creating simulations of probability.</li> <li>• The power of simulation as a problem-solving technique for making decisions under uncertainty should be a prominent experience.</li> </ul>
<p><b><u>Standard 2. MATRICES</u></b></p> <p>Students use matrices.</p>	<p>MATRICES</p> <ul style="list-style-type: none"> <li>• Use matrices to organize and store data.</li> <li>• Use matrix operations, row reduction techniques, inverse of a matrix, and Markov chains to solve problems</li> </ul>	<p>MATRICES</p> <ul style="list-style-type: none"> <li>• Investigations should include matrices.</li> <li>• Use of matrices and matrix operations to record information and to deal with solutions of systems of equations.</li> </ul>
<p><b><u>Standard 3. RECURSION</u></b></p> <p>Students use recursive techniques.</p>	<p>RECURSION</p> <ul style="list-style-type: none"> <li>• Use recursive thinking and finite differences to solve problems.</li> </ul>	<p>RECURSION</p> <ul style="list-style-type: none"> <li>• The distinction between continuous and discrete approaches in the solution of mathematical problems should also be a part of the experiences provided by these teachers and should be introduced initially at an intuitive and informed level.</li> </ul>
<p><b><u>Standard 4. GRAPH THEORY</u></b></p> <p>Students use graph theory techniques.</p>	<p>GRAPH THEORY</p> <ul style="list-style-type: none"> <li>• Use graphs to model a problem situation.</li> <li>• Use critical path analysis to solve scheduling problems.</li> <li>• Use graph coloring techniques, minimal spanning trees, and bin-packing techniques to solve problems.</li> </ul>	<p>GRAPH THEORY</p> <ul style="list-style-type: none"> <li>• Graphs and trees should be explored, along with properties of graphs and trees, matrix representations of graphs, and incidence paths in graphs.</li> </ul>
